13. Future Filing and Registration Plan

14. Declaration and Signatures

1. INTRODUCTION

This document serves as a formal declaration and technical disclosure of intellectual property developed under the **Handbill Project**, a mobile-first advertising and commerce platform.

The purpose of this document is to:

- Establish ownership of proprietary innovations
- Describe the technical functionality of the system
- Prepare for patent and copyright registration in Ghana
- Prevent unauthorized use or duplication

2. LEGAL & INSTITUTIONAL FRAMEWORK IN GHANA

The Handbill Team acknowledges the regulatory bodies responsible for intellectual property under the **Ministry of Justice and Attorney General's Department**:

2.1 Patents (Industrial Property)

Administered by:

Registrar General's Department (RGD)

Industrial Property Office

Responsible for:

- Patents
- Utility models
- Industrial designs
- Trademarks

2.2 Copyright (Creative & Software Works)

Administered by:

Copyright Office of Ghana

Responsible for:

- Software registration
- Digital and creative works protection
- Enforcement of copyright laws

3. STATEMENT OF OWNERSHIP AND INTENT

The Handbill Team declares that:

- All concepts described herein are **original and proprietary**
- The team intends to formally register these innovations
- The intellectual property will be protected under Ghanaian law
- Any unauthorized reproduction or use is prohibited

4. TECHNICAL FIELD OF THE INVENTION

This invention relates to:

- Digital Advertising Systems
- Mobile-Based Marketing Platforms
- Human-Computer Interaction Tracking
- Attention Verification Technologies
- Performance-Based Advertising Models

5. BACKGROUND AND PROBLEM STATEMENT

Traditional digital advertising platforms (e.g., Facebook, Instagram, X):

- Charge advertisers based on **impressions**, not real attention
- Count views even when users:
 - Scroll quickly
 - Ignore content

- Do not engage meaningfully
- Do not reward users for their attention

This creates:

- Inefficient advertising spend
- Lack of transparency
- No value return to viewers

6. SUMMARY OF THE INVENTION (PoE)

The **Proof-of-Engagement (PoE)** system is a proprietary method that:

- ✓ Verifies real human attention
- ✓ Ensures advertisers are charged only after engagement
- ✓ Rewards users based on verified interaction

7. DETAILED DESCRIPTION OF THE SYSTEM

7.1 Core Mechanism

The PoE system includes:

A. Attention Tracking Engine

- Measures active viewing duration (minimum threshold: e.g., 10 seconds)

B. Interaction Detection Layer

Tracks real human signals:

- Scrolling
- Tapping
- Swiping

C. Activity Validation System

- Detects app focus state
- Pauses tracking when:
 - App is minimized
 - Screen is inactive

7.2 Execution Flow

1. User opens advertisement
2. System begins tracking attention
3. Interaction signals are monitored
4. System validates engagement authenticity
5. Upon completion:
 - Engagement is marked valid
 - Advertiser is charged
 - User is credited

7.3 Integration with Platform Economy

PoE integrates with:

- Cost Per Click (CPC)
- Cost Per View (CPV)
- Commission-based sales (Agents & Warehousemen)

8. NOVELTY AND INNOVATION CLAIMS

The invention is novel because it:

- Introduces **verified attention before billing**
- Combines **interaction tracking + time validation**
- Prevents fraudulent impressions
- Enables **direct user compensation**

Unlike existing systems:

- Facebook, Instagram, and X do not verify attention
- They rely on passive impression models

9. INDUSTRIAL APPLICABILITY

The PoE system can be applied in:

- Digital advertising platforms
- E-commerce systems
- Mobile marketing applications
- Data analytics and behavioral tracking systems

10. SCOPE OF PROTECTION (CLAIMS)

The Handbill Team claims protection over:

1. The PoE methodology
2. Attention verification algorithms
3. Interaction-based validation systems
4. Reward-based engagement models
5. Integration with advertising and commerce systems

11. COPYRIGHT DECLARATION

The following are protected under copyright:

- Software architecture
- Source code
- UI/UX design
- Documentation and system workflows

Ownership: **Handbill Team**

12. CONFIDENTIALITY STATEMENT

This document contains proprietary information.

Unauthorized:

- Copying
- Distribution
- Reverse engineering

...is strictly prohibited.

13. FUTURE FILING PLAN

The Handbill Team will:

1. Submit patent application to:
Registrar General's Department (Industrial Property Office)
 2. Register software with:
Copyright Office of Ghana
 3. Engage legal professionals for:
 - Patent drafting
 - International protection
-

14. DECLARATION AND SIGNATURES

We, the undersigned, declare that the information provided in this document is true and represents original work developed by the Handbill Team.

1. FULL PATENT APPLICATION (ENHANCED)

Title of Invention

Proof-of-Engagement (PoE): A System for Verifying Human Attention in Digital Advertising

Abstract

The invention relates to a system and method for verifying real human attention in digital advertising environments before financial transactions occur. The system measures active viewing time and detects user interaction signals such as scrolling, tapping, and swiping, while monitoring device activity states to prevent false engagement. Only verified engagement results in advertiser billing and user compensation. This approach improves advertising efficiency, reduces fraud, and introduces a fair value exchange model between advertisers and users.

Field of Invention

This invention relates to:

- Digital Advertising Systems
- Human Attention Measurement
- Mobile Application Systems
- Behavioral Analytics

Background

Existing platforms such as Facebook, Instagram, and X charge advertisers based on impressions, even when users do not actively engage with content. This leads to inefficiencies, wasted ad spend, and lack of transparency.

Summary of the Invention

The PoE system ensures that:

- Engagement is **verified before billing**
- Users are **rewarded for real attention**
- Advertisers pay only for **validated interactions**

Detailed Description

(Condensed since already covered above)

The system includes:

- Attention Tracking Engine
- Interaction Detection Layer
- Activity Validation System
- Reward & Billing Engine

CLAIMS (Most Important Section)

Claim 1 (Primary Claim)

A computer-implemented method for verifying human attention in digital advertising, comprising:

- measuring active viewing duration,
- detecting user interaction signals,
- validating device activity state,
- and executing billing and reward processes only upon verified engagement.

Claim 2

The method of claim 1, wherein interaction signals include scrolling, tapping, or swiping.

Claim 3

The method of claim 1, wherein engagement tracking is paused when the device is inactive or the application is minimized.

Claim 4

The method of claim 1, wherein a minimum engagement threshold (e.g., 10 seconds) must be met before validation.

Claim 5

The method of claim 1, wherein verified engagement results in:

- advertiser billing
- user reward allocation

Claim 6

A system comprising:

- a mobile application
- a server-side analytics engine
- a verification module
configured to implement Proof-of-Engagement.

Claim 7

The system further integrates with:

- Cost Per Click (CPC)
- Cost Per View (CPV)
- Commission-based commerce systems

HANDBILL PROJECT

Patent & Copyright Concept Declaration Document

Prepared By: Handbill Team

Date: [22/03/2026]

1. Introduction

This document serves as a formal declaration of intellectual property ownership and intent by the Handbill Team regarding the development of innovative digital advertising and commerce technologies under the Handbill platform.

Handbill is a mobile-first advertising and commerce system designed to transform smartphones into personal billboards, while introducing new economic models that redefine how attention, advertising, and value exchange operate in digital ecosystems.

This document specifically outlines the proprietary concept known as **Proof-of-Engagement (PoE)** and establishes the intention of the Handbill Team to seek **patent and copyright protection** under the laws of the Republic of Ghana.

2. Governing Institutions in Ghana

The Handbill Team acknowledges that the responsibility for managing and registering intellectual property rights in Ghana is administered under the **Ministry of Justice and Attorney General's Department**, through the following institutions:

2.1 Patents (Industrial Property)

Patent registration and protection for technological innovations are managed by the **Registrar General's Department (RGD)**, specifically through its **Industrial Property Office of the Government Of Ghana**.

This office is responsible for:

- Granting patents
- Registering utility models
- Protecting industrial designs
- Managing trademarks

2.2 Copyrights (Creative and Software Works)

Copyright protection for software, digital systems, and creative expressions is administered by the **Copyright Office of Ghana**.

This office is responsible for:

- Registering software and digital works
- Protecting intellectual property rights
- Enforcing copyright laws

3. Statement of Intent

The Handbill Team intends to formally submit and register its intellectual property with the above-mentioned institutions in Ghana to ensure:

- Legal protection of its innovations
- Recognition of authorship and ownership
- Prevention of unauthorized use, duplication, or exploitation
- Commercial rights and licensing control

4. Description of the Innovation: Proof-of-Engagement (PoE)

4.1 Overview

The Handbill platform introduces a proprietary system known as **Proof-of-Engagement (PoE)**.

Proof-of-Engagement is a technological method designed to **verify real human attention before any financial transaction or reward is executed** within a digital advertising environment.

4.2 Core Functionality

The PoE system operates by:

- Measuring **active viewing time** (e.g., a minimum threshold such as 10 seconds)
- Detecting **real user interaction signals**, including:
 - Scrolling
 - Tapping
 - Swiping
- Monitoring device state to ensure:
 - The application remains active
 - The screen is not minimized or inactive

If inactivity is detected, the system:

- Pauses engagement tracking
- Prevents false validation of attention

Only after these conditions are satisfied:

- The advertiser is charged
- The user (viewer) is credited
- The engagement is recorded as valid

4.3 Innovation and Novelty

The Handbill PoE system differs significantly from existing advertising platforms such as Facebook, Instagram, and X (Twitter), where:

- Advertisers are often charged based on **impressions**, regardless of actual user attention
- Ads may be counted even when:
 - Users scroll past quickly
 - Audio is muted
 - No meaningful engagement occurs
- Viewers are **not directly compensated** for verified attention

In contrast, Handbill introduces:

- **Verified attention-based billing**
- **Direct user compensation for engagement**
- **Fraud-resistant interaction tracking**
- A shift from passive impressions to **measurable human attention**

5. Intellectual Property Claim

The Handbill Team hereby asserts that:

- The **Proof-of-Engagement (PoE)** system is an original concept and technological implementation developed by the Handbill Team
- All associated algorithms, methodologies, workflows, and system designs are the intellectual property of Handbill
- The concept qualifies for **patent protection** as a novel digital process and system
- The implementation (software, codebase, and documentation) qualifies for **copyright protection**

6. Scope of Protection

The Handbill Team seeks protection over:

- The PoE methodology and system logic
- Engagement verification mechanisms
- Attention-based reward systems
- Associated analytics and measurement frameworks
- Any derivative implementations of the PoE concept

7. Confidentiality and Ownership

This document and the concepts described herein are **confidential and proprietary** to the Handbill Team.

Unauthorized use, reproduction, or distribution of these ideas without express permission is strictly prohibited.

8. Future Actions

The Handbill Team will:

1. Prepare formal patent documentation for submission to the **Registrar General's Department (Industrial Property Office)**
2. Register software and documentation with the **Copyright Office of Ghana**
3. Engage legal professionals to ensure compliance with Ghanaian and international intellectual property laws
4. Explore international protection frameworks where applicable

2. TECHNICAL DIAGRAMS

A. Flowchart (PoE Logic)

B. System Architecture

Excellent—this is now a **complete intellectual property + business protection package** for Handbill. I'll structure everything clearly so you can **use it directly for legal review, submission, and pitching.**

1. FULL PATENT APPLICATION (DRAFT)

Title of Invention

Proof-of-Engagement (PoE): A System and Method for Verifying Human Attention in Digital Advertising

Abstract

The invention discloses a system and method for verifying real human engagement with digital advertisements before billing advertisers or rewarding users. The system tracks active viewing time and interaction signals, including scrolling, tapping, and swiping, while monitoring device activity state. Engagement is validated only when predefined thresholds are met. The system prevents fraudulent impressions by pausing tracking during inactivity. This approach introduces a verified attention-based advertising model that ensures fairness, transparency, and efficiency in digital advertising ecosystems.

Technical Field

This invention relates to:

- Digital Advertising Systems
- Mobile Computing
- Human Attention Measurement
- Interaction Tracking Technologies
- Performance-Based Advertising

Background

Current platforms like Facebook, Instagram, and X:

- Charge based on impressions
- Do not verify attention
- Do not reward users

This leads to:

- Wasted advertising spend
- Low engagement quality
- Lack of transparency

Summary of the Invention

The PoE system:

- Verifies human attention before billing
- Tracks interaction + time
- Rewards users for verified engagement

Detailed Description

System Components

1. **User Device (Mobile App)**
2. **Engagement Tracking Engine**

3. **Interaction Detection Module**
4. **Validation Engine**
5. **Reward & Billing System**
6. **Analytics Engine**

Execution Flow (Diagram Description)

Claims (Core Legal Protection)

Claim 1

A method for verifying user engagement in digital advertising comprising:

- tracking active viewing duration,
- detecting user interaction signals,
- validating engagement based on predefined thresholds.

Claim 2

The method of Claim 1, wherein engagement tracking is paused when the application becomes inactive.

Claim 3

The system includes interaction signals selected from:

- scrolling
 - tapping
 - swiping
-

Claim 4

A system that charges advertisers only after engagement validation.

Claim 5

A system that rewards users upon successful engagement verification.

Claim 6

A method that prevents fraudulent impressions through activity-state monitoring.

Claim 7

Integration of the engagement verification system with a commission-based marketing model involving agents and warehousemen.

2. TECHNICAL DIAGRAMS

A. System Architecture

B. Flowchart (PoE Logic)

3. NON-DISCLOSURE AGREEMENT (NDA)

HAND BILL NDA AGREEMENT

This Agreement is made between:

Disclosing Party: Handbill Team

Receiving Party: _____

1. Purpose

To protect confidential information related to the Handbill platform and PoE system.

2. Definition of Confidential Information

Includes:

- Business models
- Algorithms
- Technical designs
- Source code
- Documentation

3. Obligations

The Receiving Party agrees to:

- Not disclose information
- Not copy or reproduce
- Use information only for evaluation

4. Exclusions

Does not apply to:

- Public information
- Independently developed information

5. Duration

This agreement remains valid for **5 years**.

6. Governing Law

Republic of Ghana

7. Signatures

Disclosing Party: _____

Receiving Party: _____

Date: _____

Intellectual Property Declaration – Commission-Based Marketing System

The Handbill platform introduces a novel and proprietary commission-based marketing system that redefines the structural roles within digital advertising and commerce ecosystems.

Under this system:

Advertisers are transformed into “Warehousemen,” who are responsible for listing products, managing inventory, and defining pricing and commission structures.

Ad Viewers are transformed into “Agents,” who act as independent marketing intermediaries responsible for promoting, distributing, and facilitating the sale of products listed by Warehousemen in exchange for a predefined commission.

This transformation establishes a hybrid advertising-commerce framework that integrates product distribution, performance-based marketing, and decentralized sales participation within a single platform.

Legal Claim of Ownership

The Handbill Team hereby asserts that:

The conceptual framework, system design, workflows, and economic model governing this commission-based transformation are original and proprietary.

This system constitutes intellectual property, subject to protection under applicable patent, copyright, and related intellectual property laws.

Any unauthorized reproduction, adaptation, implementation, or commercialization of this system, in whole or in part, without prior written consent from the Handbill Team, shall constitute an infringement and may result in legal action.

Technical Architecture of the System

The commission-based marketing system is supported by a structured and integrated technical architecture comprising the following core components:

1. User Role Management Layer

Defines and manages dynamic role transitions:

Advertiser → Warehouseman

Ad Viewer → Agent

Implements role-based permissions and access control mechanisms (RBAC)

2. Product & Inventory Management Module

Enables Warehousemen to:

Upload product images and descriptions

Define product pricing

Specify commission rates per product

Manage stock quantities

3. Commission Engine

Calculates and enforces commission structures defined by Warehousemen

Tracks:

Sales generated by Agents

Commission earned per transaction

Ensures transparent and auditable payout logic

4. Agent Engagement & Distribution Layer

Provides Agents with tools to:

Access product listings

Promote products via external and internal channels

Tracks performance metrics such as:

Clicks

Conversions

Sales attribution

5. Transaction & Validation System

Validates completed sales transactions

Links transactions to specific Agents and Warehousemen

Integrates with payment systems for commission settlement

6. Communication Interface

Includes an in-app chat feature enabling communication between Warehousemen and Agents

Supports coordination while allowing offline transaction fulfillment where applicable

7. Analytics & Reporting Engine

Generates insights on:

Agent performance

Product sales trends

Commission distributions

Provides data for optimization and strategic decision-making

System Innovation

This architecture introduces:

A decentralized sales network

A performance-based incentive structure

A direct linkage between advertising and revenue generation

Unlike traditional platforms, this system:

Converts passive viewers into active economic participants

Enables advertisers to operate as product distributors

Creates a scalable, commission-driven marketplace ecosystem

Enforcement and Protection

The Handbill Team reserves all rights to:

Enforce its intellectual property claims

Prevent unauthorized use or replication

Pursue legal remedies against infringement

This applies regardless of the status of pending or approved patent applications.

Conclusion

The commission-based marketing system represents a significant advancement in digital platform design, combining advertising, commerce, and user participation into a unified, monetizable ecosystem. Its structure, implementation, and operational logic remain the exclusive intellectual property of the Handbill Team.

4. PITCH FOR GHANA RGD SUBMISSION

Patent Submission Pitch – Handbill PoE System

Opening

We present the **Proof-of-Engagement (PoE)** system, a Ghanaian-developed innovation designed to transform digital advertising.

Problem

Current platforms:

- Charge for impressions
- Do not verify attention
- Waste advertiser resources

Solution

Handbill introduces:

- Verified attention tracking

- Interaction-based validation
- Fair reward system

Innovation

- First system to combine:
 - Time tracking
 - Interaction validation
 - Activity monitoring

Impact

- Improves advertising efficiency
- Creates income opportunities
- Builds a transparent digital economy

Why It Matters for Ghana

- Promotes **indigenous technology**
- Positions Ghana as a **leader in AdTech innovation**
- Creates **jobs and digital opportunities**

Closing Statement

We seek patent protection to safeguard this innovation and contribute to Ghana's technological advancement.

Here's a **clear and professional breakdown** of the key organizations in Ghana that handle patents and copyrights for your Handbill project:

Key Intellectual Property Institutions in Ghana (To Patent Handbill's idea)

1. Registrar General's Department

Role (Patents & Industrial Property)

The Registrar General's Department (RGD), through its **Industrial Property Office**, is responsible for:

- Granting **patents for inventions**
- Registering **trademarks and industrial designs**
- Protecting technological innovations like your **Proof-of-Engagement (PoE)** system

A patent gives you **exclusive rights** to your invention for up to **20 years**, provided it meets requirements such as novelty, inventiveness, and industrial applicability. (mojagd.gov.gh)

🔗 Official Website:

- [Visit Registrar General's Department](#)

2. ☐ Copyright Office of Ghana

Role (Copyright & Software Protection)

The Copyright Office of Ghana is responsible for:

- Protecting **software, digital platforms, and creative works**
- Registering copyrights (optional but useful for enforcement)
- Handling disputes and intellectual property rights enforcement

Your Handbill:

- Source code
- UI/UX design
- Documentation

...will fall under **copyright protection**. (copyright.gov.gh)

🔗 Official Website:

- [Visit Copyright Office of Ghana](#)

🔗 Quick Summary Link (All in One Reference)

If you want a single official reference page that lists Ghana's IP authorities:

🔗 [View Ghana Intellectual Property Contacts \(WIPO Directory\)](#)

This page includes:

- Patent office details
- Copyright office contacts
- Official emails and addresses

🔥 Simple Understanding

- **RGD** → Protects your **IDEA (Patent)**
- **Copyright Office** → Protects your **CODE (Copyright)**

🚀 Pro Tip for Handbill

You should:

1. File **Patent (PoE system)** → RGD
2. Register **Software Copyright** → Copyright Office
3. Optionally expand to **ARIPO or WIPO (international protection)** later

9. Conclusion

The Handbill project represents a new paradigm in digital advertising by introducing **verified attention as a measurable and monetizable asset**.

Through the **Proof-of-Engagement (PoE)** system, Handbill aims to create a fair, transparent, and efficient advertising ecosystem that benefits advertisers, users, and the broader digital economy.

The Handbill Team is committed to protecting and advancing this innovation through proper legal and institutional channels.

10. Declaration

This document is issued as a formal declaration of intellectual property ownership and intent.

Signed:

Handbill Team

Date: 03/22/2026
